Tulip
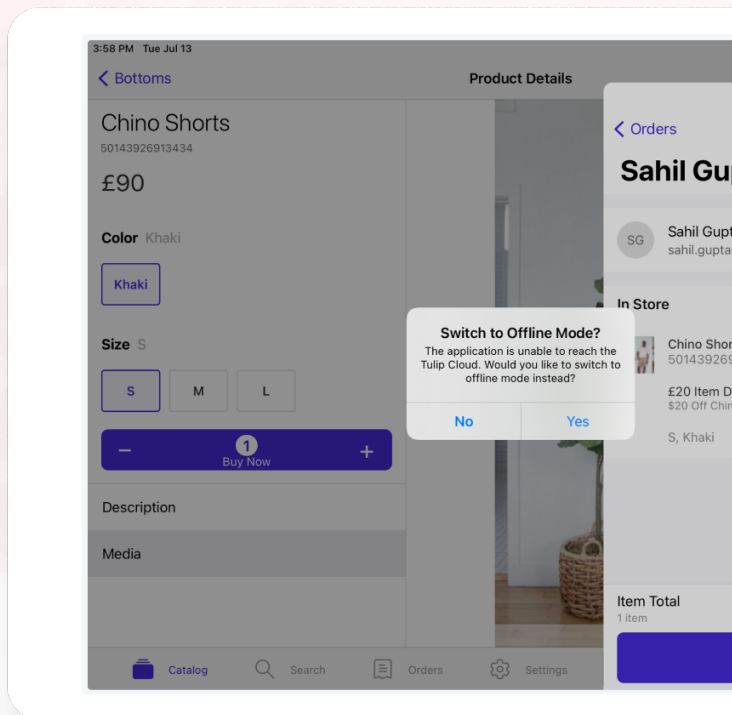

Stay on with Offline mode

Every minute of downtime means fewer sales, so it's important that your POS is running even when your network isn't.

Tulip's offline mode lets store associates take sales, access the catalog, and operate business as usual without worrying about data loss or manual reconciliation to get back online.

FEATURES

Offline-mode status bar
The orange bar at the top of the screen indicates that the application is in offline-mode so that there is never any confusion.

Effortless transition into offline mode
Transition online carts into offline mode in just a click, without losing products or associated customer information.

Full catalog access
Add products to the cart by scanning the barcode or browse the catalog to add them manually.

Manage customer data
Attach a customer to the order and add or edit their information to track engagement.

Apply discounts
Easily apply order discounts just by tapping a button.

Collect taxes and show totals
Collect taxes based on a simplified offline tax calculation and show the customer their order total on the spot.

Process payments
Allow customers to take card payments, in addition to cash, using your PIN Pad's "Store and Forward" capabilities.

Sync data
Once a network connection is restored customer and order information will automatically sync with the Tulip Cloud.
